

685 holes and one drum adds up to safer, gentler drying.

High Air Velocity

The key to safe drying of virtually all fabric types is high air velocity. With high air velocity, extremely hot air temperatures aren't required. The 685 holes that fill the back of the Siemens dryer drum allow us to increase airflow and use moderate air temperatures. The result is safe, gentle drying of virtually any garment.

Digitally Automated Drying

Select your cycle, and a network of digital sensors ensures precise temperatures throughout the drying process. It also monitors moisture content, and ends the cycle the moment clothes reach the optimum level of dryness for their fabric type, to avoid overheating and shrinkage.

Extra Large Drum, Extra Large 18" Opening

With a huge 6.7 cu. ft. capacity, a king-size comforter can be dried easily. It also means more room for clothes to blow around, for more even drying. And an 18" wide door opening makes it easier to load and unload clothes.

German Engineering

Each dryer is individually run-tested before it leaves our factory. The drum is high-grade, rust-resistant stainless steel, not silver-painted steel. All components are engineered to be durable and long-lasting. No detail is overlooked in the construction of a Siemens ultraSense® dryer.

ultraSense® Dryers

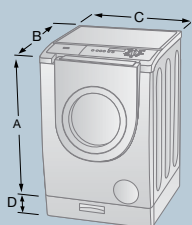

The future moving in.
